

Energy and environmental guidelines

By introducing and maintaining an environmental and energy management system our intention is to be aware of the resource consumption of Pilz GmbH & Co.KG at its Ostfildern site and of the associated impact on the environment, in order to eliminate unnecessary consumption.

We are committed to continuous **improvement** of our **energy and environmental performance** in order to **protect the environment**.

We want to achieve this by:

- Developing environmentally-friendly products using ecological materials and energy-saving technologies
- Providing the necessary resources and information to achieve our strategic and operational objectives
- Involving our staff
 - through ideas management
 - through regular training
- Purchasing energy-efficient and environmentally-friendly products and services, wherever possible
- Communicating with our suppliers

In all our activities it goes without saying that we meet and regularly review our binding commitments. Every member of staff should be aware of the impact their activities have on the environment and so on our life force, and use resources responsibly. **It is the duty of each member of staff to protect the environment and use energy efficiently.**
