

▶ Product Discontinuation

PMD relays

The products of the PMD srange and PMD sigma product families have passed their zenith.

Due to the age of the components, procurement is becoming increasingly expensive and economically more difficult. Due to components that are discontinued at short notice and are therefore finally in stock, we are forced to discontinue the products affected by these components. At the same time, we also want to streamline the portfolio and discontinue LowRunner products, as these can no longer be produced economically.
