## M12 interfaces for safe signal transfer

Ostfildern, 11.02.2019 - **In the automation system PSS 4000-R for railway, Pilz now provides two new control heads with M12 interface. So reliable signal transmission is guaranteed on and beside the track, even under adverse conditions!**

Two new control heads with interfaces for M12 plug-in connectors expand the railway range of the automation system PSS 4000-R from Pilz: one head module with PLC functions and one I/O head module. Both are suitable for application conditions in accordance with the CENELEC standards EN 5012x. Thanks to the 4-pin coded M12 interfaces they ensure interference-free communication on rail vehicles and in signal and telecommunication facilities, even with difficult environmental conditions and high mechanical loads.

Suitable I/O modules with railway approval are available for safe digital and analogue signal processing. T-type I/O modules can be used for the extended temperature range of -40 to +70°C for non-safety-related signal processing.

Information on the automation system PSS 4000-R can be found [here](#)

### **The Pilz Group**

The Pilz Group is a global supplier of products, systems and services for automation technology. Based in Ostfildern, near Stuttgart, the family-run company employs around 2,500 people. With 42 subsidiaries and branches around the world, Pilz supplies safe solutions for people, machinery and the environment. The technology leader offers complete automation solutions comprising sensors as well as control and drive technology - including systems for industrial communication, diagnostics and visualisation. Consulting, engineering and training round off its international range of services. In addition to mechanical and plant engineering, solutions from Pilz are used in many sectors such as wind energy, railway technology and robotics.
